# ANIMAL FARM V2 - THE MIGRATION

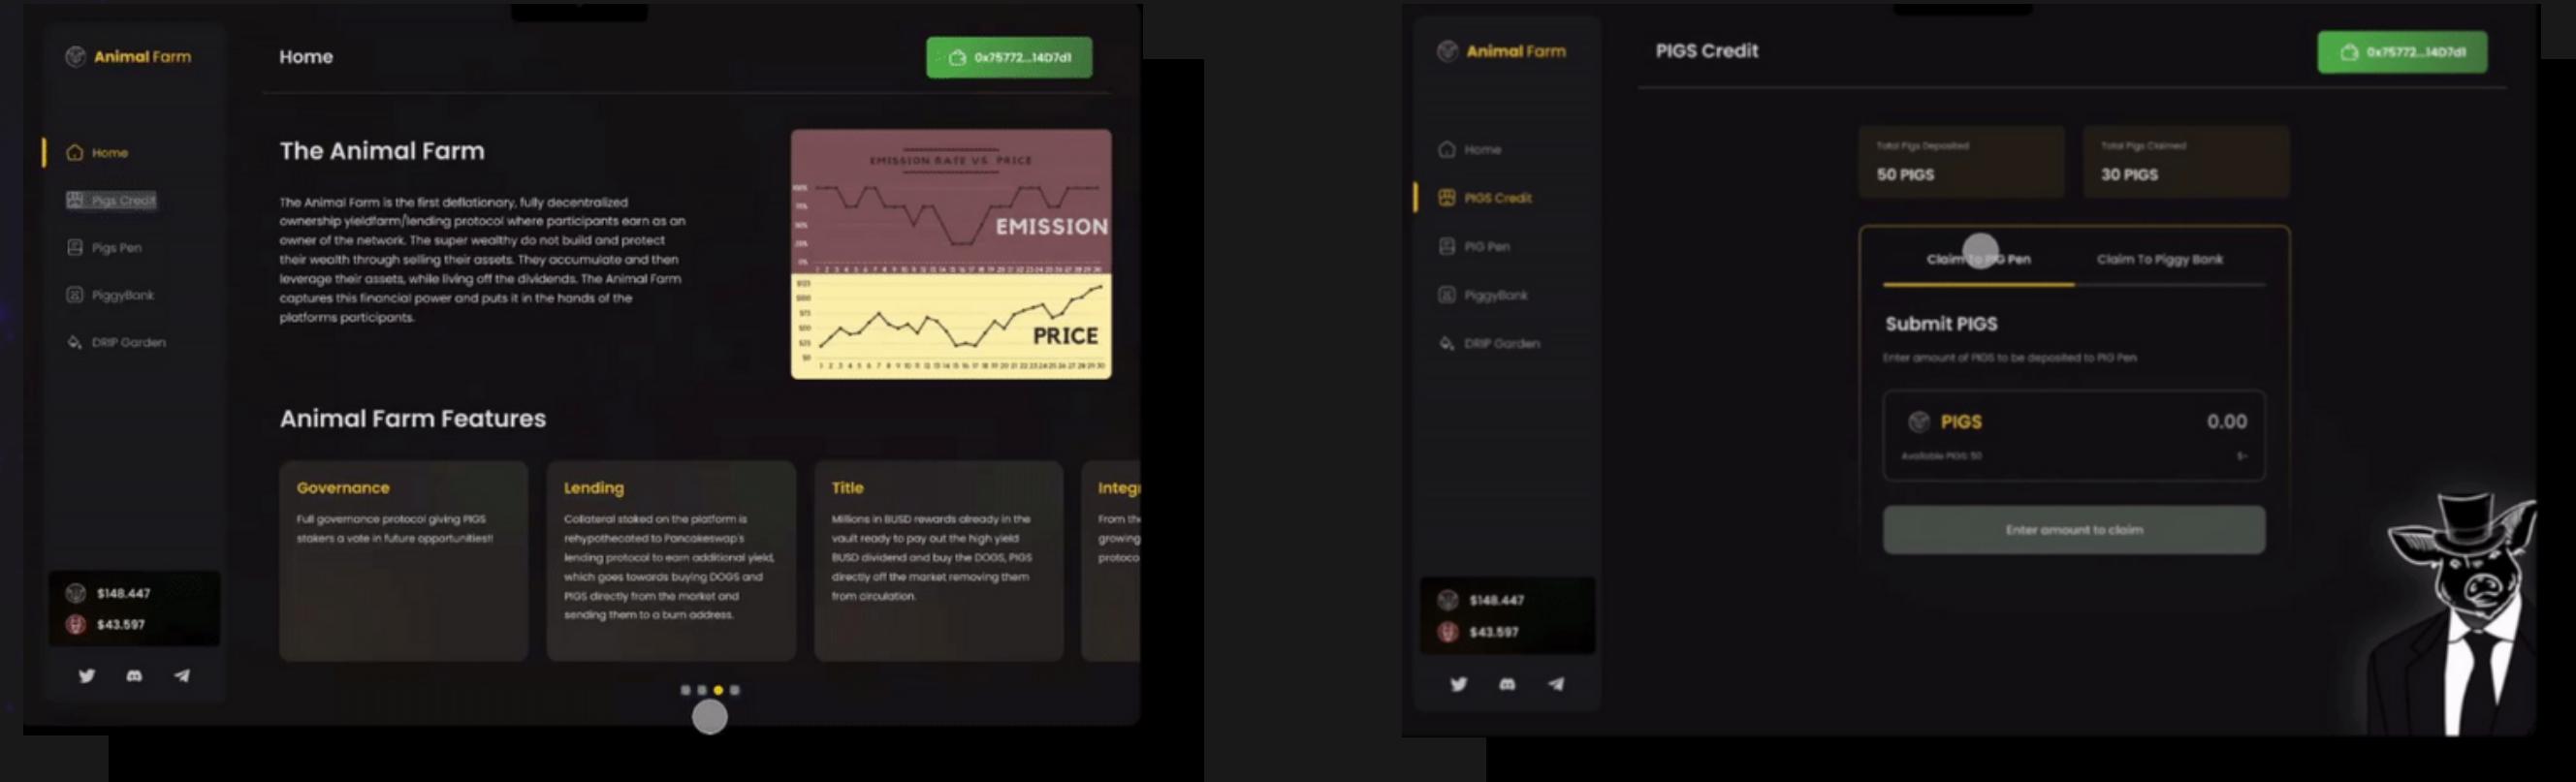

PancakeSwap announced that they will be ending emissions on their v1 Syrup pools. The Animal Farm generated millions of dollars worth of BUSD every month on the v1 Syrup pools.

Being that this mechanism plays such a major role in The Animal Farm, it was decided that a full migration of all Animal Farm related contracts was required to continue generating millions of dollars worth of BUSD dividends every month via v2 Syrup pools.

# WEBSITE UPGRADE

We took this migration as an opportunity to make multiple improvements to the platform including the UI and website as a whole. There is a sleeker front page that presents key facts about the protocol in a more appealing fashion.

Product dashboards will make it easier for users to understand the benefits of the system and how to interact with it, while also encouraging users to deposit and compound over claiming and withdrawing.

We will launch the PIGS, PIGGY BANK and PIGPEN at the same time. Continue reading to hear more about how you can use the PIGS Credit UI and if it applies to you!

# PIGGY BANK CREDITING

Those who were staked in the Piggy Bank at the time the contracts were paused for migration will not have to take any action to be credited in v2 Piggy Bank.

The Piggy Bank crediting process was formulated by taking the LPs deposited by each user minus the LPs they withdrew. The sum was then used to simulate deposits in the same order they were placed in v1, only with a higher starting seed value.

## PIGS/BUSD

Starting with a higher seed value has the same functionality as launching a token with a deeper liquidity pool. This means as the deposits are simulated to determine how many PIGLETS each user should be credited in v2, the price impact of each is minimal.

Keeping the price impact of TRUFFLES minimal as each user is credited in the system ensures that everyone is given a fair rate and no one is getting substantially more PIGLETS just because they were in the contracts seconds before another user.

Using a formula that subtracts LPs withdrawn from LPs deposited to determine the LP value users will be credited in v2 ensures that those who botched the contract with the intentions of draining LP will not be credited in v2, which results in all other users getting substantially more value than they had in v1.

It's our way of ensuring a fair distribution without the need for arbitrary decision making that could be used for insider favoritism.

# PIGPEN CREDITING

## PIGS

### OPTION 1..

Send BUSD to the credit contract, the credit contract will pair this BUSD with their allocated PIGS and then utilize the gift stake function to make a stake for them in Piggy Bank.

The UI on the credit contract allows them to time lock this stake just like the Piggy Bank dashboard, allowing them to earn time locking bonuses.

Those who credit the Piggy Bank in the first 48 hours will get the same additional 20% bonus as people who deposit fresh capital into the Piggy Bank in the first 48 hours.

### OPTION 2..

Credit it to the PigPen. In the PigPen they will then start earning 3% of the PigPen's BUSD balance every day, which is worth millions of BUSD right now.

On top of this we have added another cashflow into the PigPen which is extremely attractive and will be generating millions of dollars worth of dividends for PigPen stakers as soon as the PigPen goes live.

This new cashflow is PIGS which are generated from Piggy Bank deposit/withdrawal fees. These PIGS will be sent to PigPen and used as rewards to PigPen stakers.

# WALLET CREDITING

**PIGS**

**PIGS/BUSD**

Users who had PIGS or PIGS LP in their wallet at the time the contracts were paused for v2 migration will not have to take any future actions to be credited with their v2 PIGS or PIGS LP.

When v2 PIGS goes live the PIGS and PIGS LP will be airdropped into the wallet of these users. Less than 3% of the PIGS total supply will be going to the wallets of holders. All of the other PIGS and PIGS LP tokens will be credited to users in PIGGY BANK or PigPen where they are locked and cannot negatively effect the price of PIGS!!

# V2 IMPROVEMENTS

When Animal Farm goes fully live (when we migrate for v2 PCS Syrup Pool integration) BUSD will continue to be generated for PigPen dividends from Animal Farm deposit fees as well as taxes on DOGS, but with improved logic to increase the BUSD cash flow and reduce the sell pressure on both of our native assets, DOGS and PIGS.

On top of this we are in negotiations with a major DEX to utilize our rehypothecation functionality to lend out our single asset pools, not just our LP collateral which we are doing now.

This will generate millions of dollars of additional BUSD every month for PigPen dividend injections.

Below I will go into detail on improvements we have made to everything from the PigPen and Piggy Bank contracts to the DOGS and PIGS tokens themselves.

# V2 IMPROVEMENTS

## PIGGY BANK V1

Piggy Bank is the first variable time locking staking protocol which allows users to earn compound interest on both their principal and the bonus they receive for agreeing to put off the claiming of ROI for a period of time from 1 week to 156 weeks.

We have made multiple significant improvements to the Piggy Bank that make v2 a whole new beast. Most importantly are the changes we made to ensure all users can benefit from the system regardless of their stake size or when they entered the system.

v1 was restricted to mechanics adopted from legacy code that did not allow users to buy fractions of a PIGLET. This is due to the limitations in solidity which would round off a fraction of a PIGLET to 0, not crediting the user at all if their deposit or compound was not large enough to produce a full PIGLET.

Time locking bonuses in Piggy Bank are made available daily to stakers and for them to be credited the user must compound them into their principal. In V1 if the user's stake was too small to return a daily ROI large enough to produce a whole PIGLET when compounded, the user's compounded value would be rounded to 0 PIGLETS, effectively not allowing them to be credited with that day's bonus distribution or earned dividends.

This put smaller users at a major disadvantage to larger users who were able to compound daily and collect their daily bonus distribution.

# V2 IMPROVEMENTS

## PIGGY BANK V2

In v2, no matter how small your stake is, you will always be able to compound daily and collect your daily time locking bonus distribution!! This is due to a major innovation we have developed and integrated which allows fractions of PIGLETS to be purchased.

When you combine this with a higher starting seed value, which ensures less price impact from early buyers and the redistribution of PIGLETS based on the metrics which were explained earlier in the Piggy Bank Crediting page, all users have an opportunity to make massive returns in the protocol regardless of their initial size!

These are just more ways Piggy Bank is breaking apart from the crowd and putting the power of advanced algorithms in the hands of every user through an easy to use dashboard.

Since Piggy Bank will be open before DOGS goes live, all referral bonuses will be set to 2% until DOGS go live, at which point referral bonuses will defer to the amount of DOGS the referrer has staked in the single asset DOGS pool, as explained below.

Go down to the Piggy Bank section of the whitepaper for more details!

# V2 IMPROVEMENTS

## PIGPEN V2 VESTING

When I'm developing logic structures for our products I not only look to what's working in DeFi but also in traditional markets. Many DeFi developers overlook functions that have worked for generations in traditional markets which would fit perfectly in a DeFi product.

PIGS which have been staked in the PigPen represent a share ownership of the Animal Farm platform. This includes a share of all platform fees and a governance protocol which allows them to vote on the future of the platform.

Due to the important role PigPen stakers have in the platform as well as the huge dividend payouts they earn, it is important that a vesting protocol is implemented on the principal of PigPen stakers. Just as company shares are often vested in traditional markets to ensure the owners are operating to the long term benefit of the platform. We have implemented a 50 day vesting period on the PIGS principal staked in the PigPen. This 50 day vesting period works by making 2% of stakers principal available for withdrawal daily, effectively making 100% of their principal withdrawable after 50 days.

## INCREASED CASHFLOW

v1 PigPen was a first of its kind allowing stakers to earn a high yield dividend paid out in BUSD. This BUSD dividend will remain in v2 but on top of it we have added a new major cashflow that allows PigPen stakers to earn PIGS as well. The PIGS that will be earned as yield in v2 PigPen come from deposit/withdrawal fees in Piggy Bank. This is HUGE!!

## BULLISH PIGS

With these new and innovative PigPen mechanics, not only will it be generating way more value than it did in the v1 model, it is also way more bullish for PIGS considering 97% of PIGS will be locked up at launch, PIGS will be highly deflationary, and the incentive to lock it up for yield is stronger than ever

# V2 IMPROVEMENTS

## UPDATED BURN MECHANISM

Many investors base their trades on data presented on analytic sites. Important values such as total supply, marketcap and volume help the educated trader find value and make important decisions.

Many developers "burn" tokens by sending them to a 0x000 address and this does effectively take them out of the circulating supply, but the tokens still exist in the total supply, affecting values such as marketcap, volume, etc..

With DOGS and PIGS v2 we implemented a burn mechanism that reduces the total supply in real time while the tokens are being transacted, as opposed to sending the tokens to a 0x000 burn address.

This mechanism actually removes the tokens from the total supply and this allows for us to have more accurate data about our tokens on analytic sites such as CoinMarketCap and DexTools!!

# V2 IMPROVEMENTS

## V1 VS. V2 DOGS AUTO-LIQUIDITY

In v1 Animal Farm the 3% tax on DOGS transaction which was allocated to providing and locking BUSD liquidity for the DOGS token on Pancakeswap would first send the DOGS derived from the 3% tax to the liquidity helper contract.

25% of all deposit fees generated from Animal Farm staking are converted to BUSD and also sent to this liquidity helper contract.

When the amount of BUSD on the contract goes over a specified threshold, the liquidity helper contract then pairs the BUSD and DOGS held by the liquidity helper contract, adding this DOGS/BUSD liquidity to PancakeSwap where it is locked. This increased locked liquidity not only allows for a deeper liquidity pool to help offset the pressures of selling, raises the price floor of the DOGS token, and increases the security of the protocol, but it also further decentralizes control of the asset.

If there was an uneven value of DOGS vs. BUSD on the liquidity helper contract when this threshold was met, it will either a) use some of the BUSD on the contract to buy DOGS or, b) sell some of the DOGS for BUSD, to even the value of both assets held by the contract. Once there was an equal value of the two assets on the contract, it then paired them into the DOGS/BUSD liquidity pool.

In the v2 liquidity helper contract there is never a scenario where it sells DOGS or adds sell pressure to DOGS in any way, in order to add liquidity. In fact the v2 liquidity helper contract can only add buy pressure!!

Alternatively, if there is a greater value of DOGS on the contract it will burn some of the DOGS, removing them from the contract but also removing them from the total supply of the token. This creates an equal value of the two assets on the contract and then the assets are paired on PanckeSwap where the liquidity is locked.

## BULLISH DOGS

This is not only a major innovation in DeFi, it's also extremely bullish for the DOGS asset, as the liquidity helper contract has all of the benefits provided by v1 but with major improvements which will not only add a lot more buy pressure to the DOGS token, but also relieve all of the sell pressure created by the v1 contract, and it will also make DOGS highly deflationary.

# DOGS MIGRATION

**DOGS**

DOGS primary use case is as a vehicle to earn PIGS, this means that the value of DOGS is largely derived from the value of PIGS. Due to this logic we want to do everything in our power to make PIGS as valuable as possible before DOGS goes live, this way DOGS token will have high demand right from the start.

DOGS token and DOGS Masterchef contracts need to be updated to have PCS v2 Syrup pools integration.

Even though DOGS and DOGS Masterchef contracts are the only contracts which require v2 Syrup integration, it was still extremely important that we launch PIGS, PigPen and Piggy Bank with forward compatibility which requires additional development.

The additional development for PIGS, PigPen and Piggy Bank will be completed first and the rest of the Animal Farm contracts shortly after.

This way the PIGS token has time to build immense value before the DOGS tokens are unpause, which in turn creates high demand for the DOGS token right from the start.

**PIGS, PIGGY BANK, PIGPEN  
WILL ALL BE GOING LIVE  
THURSDAY MAY, 5TH.**

**WE WILL THEN RELEASE INSTRUCTIONS ON DOGS CREDITING.**

"The vast possibilities of our great future will become realities only if we make ourselves responsible for that future."

—Gifford Pinchot

# THE ANIMAL FARM

THEANIMAL.FARM

# FARM MECHANICS

The Animal Farm has two native tokens, DOGS and PIGS. Both are innovative assets with unique tokenomics which balance each other perfectly and allow for a multitude of options for investors who want to take full advantage of the platform.

PIGS are the governance token of the platform. Staking PIGS allows you to be an owner of the farm! PIGS have a 3% tax on sell transactions.

DOGS are the native farming token on The Animal Farm and are earned in all farms and pools to various degrees. DOGS have a 6% base tax on all transactions and an additional 3% tax on selling.

- Half of the 6% base tax (3%) is sold for BUSD and this BUSD is sent to a vault which is paid out to PIGS stakers.
- The other half of the base tax (3%) is paired with BUSD and added to the liquidity pool raising the potential price floor of DOGS with each transaction while further decentralizing and deepening the liquidity pool.
- The additional 3% tax on selling is burned, introducing a deflationary element to the token.

# FARM MECHANICS

Dogs can be earned in all farms and pools as it's the primary farm reward token.

PIGS can be farmed exclusively in the DOGS/BNB, DOGS/BUSD and DRIP/BUSD staking contracts, as well as the DOGS single asset staking pool.

Restricting PIGS rewards to these 4 options limits the supply of PIGS tokens and also creates demand for staking DOGS and adding liquidity to DOGS.

Instead of dumping DOGS on the market, farmers can stake DOGS to earn a greater share of the platform through utilizing their PIGS rewards.

Our strategic partnership with Drip.Community allows farmers to stake DRIP/BUSD on The Animal Farm to earn PIGS, creating a new exclusive use case and new demand for DRIP while removing DRIP from circulation.

**PIGS**

**DOGS**

# FARM MECHANICS

## Deposit Fees

The PIGS governance pool allows for decentralized ownership of the farm. On The Animal Farm:

- 25% of all BUSD generated from Animal Farm deposit fees are used to buy back and add liquidity to DOGS utilizing the mechanics explained in v2 DOGS Auto-liquidity page..
- 60% of BUSD generated from Animal Farm deposit fees are used for PigPen dividends
- 10% of BUSD generated from Animal Farm deposit fees are used for marketing
- 5% of BUSD generated from Animal Farm deposit fees are used to support platform costs.

## Leveraging capital with a unique Rehypothecation contract

We will not leave our capital in contracts stagnant. The Animal Farm utilizes all available funds through staking them on PancakeSwap to earn additional yield. This is used for buybacks (30%), marketing (30%), development (30%) and platform costs (10%).

We thus have a lot more funds to add buy pressure, pay for high end marketing and continue to build features. The dev team understands the importance of marketing and have made it a primary focus. The Animal Farm has unique functions, such as dynamic emissions allowing for decentralized supply control, which give us a first mover advantage exploiting these mechanics in the market.

# DYNAMIC EMISSION RATES

## Dynamic Decentralized Supply Control Algorithm (D.D.S.C.A.)

The Animal Farm is the first farm to use a Dynamic Decentralized Supply Control Algorithm (D.D.S.C.A.) to determine the farm's emission rate for rewards in both the DOGS and PIGS token.

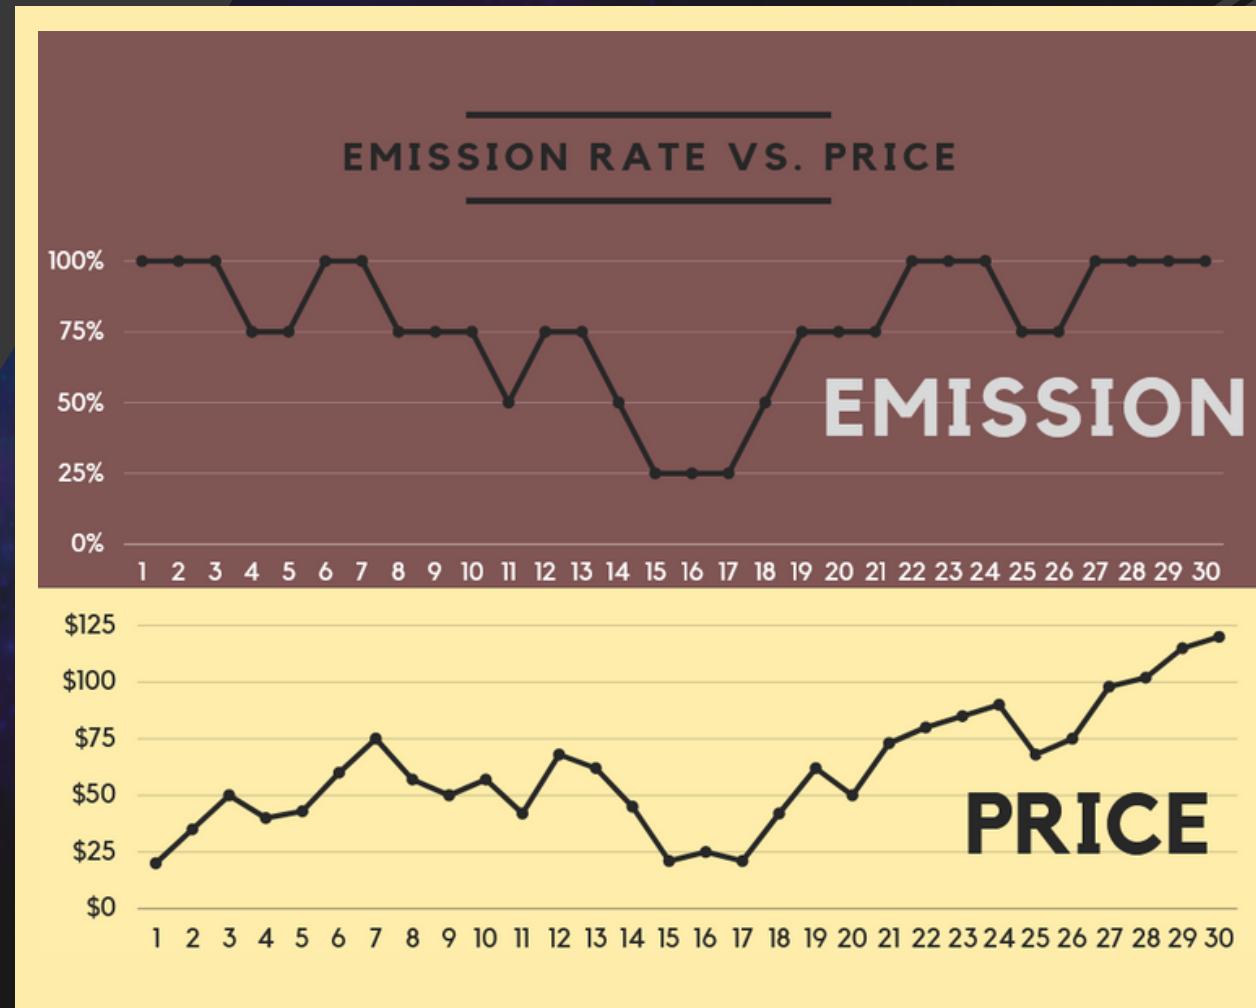

The D.D.S.C.A. is designed to adjust the supply of the DOGS and PIGS tokens through manipulation of The Animal Farm's reward emission rate.

- Gluts of demand can be met with an increase in rewards for farmers,
- While ebbs in demand can be met with a reduction in supply through a tightening of The Animal Farm's emissions.

# DYNAMIC EMISSION RATES

(D.D.S.C.A.) keeps track of current all time highs and all time lows and uses them as reference points to help determine the current demand for the L2 native tokens.

## Emission Rate vs. Price

When the demand for the token is strong and the token price is at All-time-high (ATH), the emission rate will be set to 100% and will stay at this rate until the price does at least a 25% correction from all time high to all time low. If this happens the D.D.S.C.A. will restrict the supply, allowing the current buy pressure to have a greater positive price impact and price appreciation. It will reduce the emission rate by 25%, which will bring us to the same emission rate as Thoreum, a farm which has proven to have an emission rate which is sustainable and allows for price appreciation.

The emission rate adjusts up and down by 25% based on where price and demand are in relation to all time high and all time low. The emission rate can never drop below 25% and can never increase past 100%, although the algorithm used to determine the emission rate is dynamic and always learning.

# CORE FARMS, POOLS AND THE PIG PEN

# THE PIGPEN V 2

## GUIDE TO BEING A BOSS

# THE PIGPEN

Stake PIGS

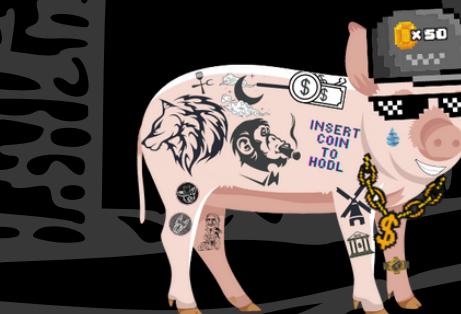

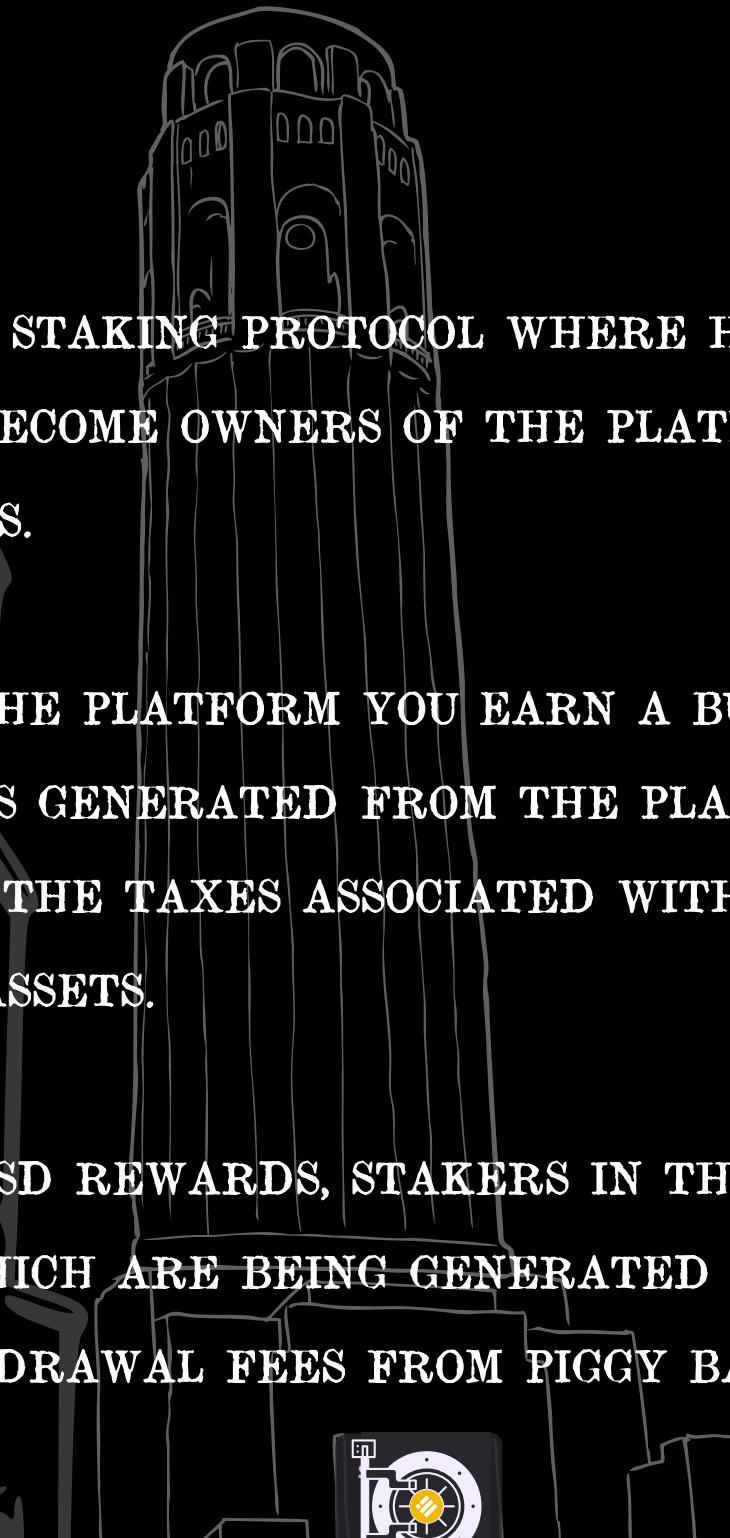

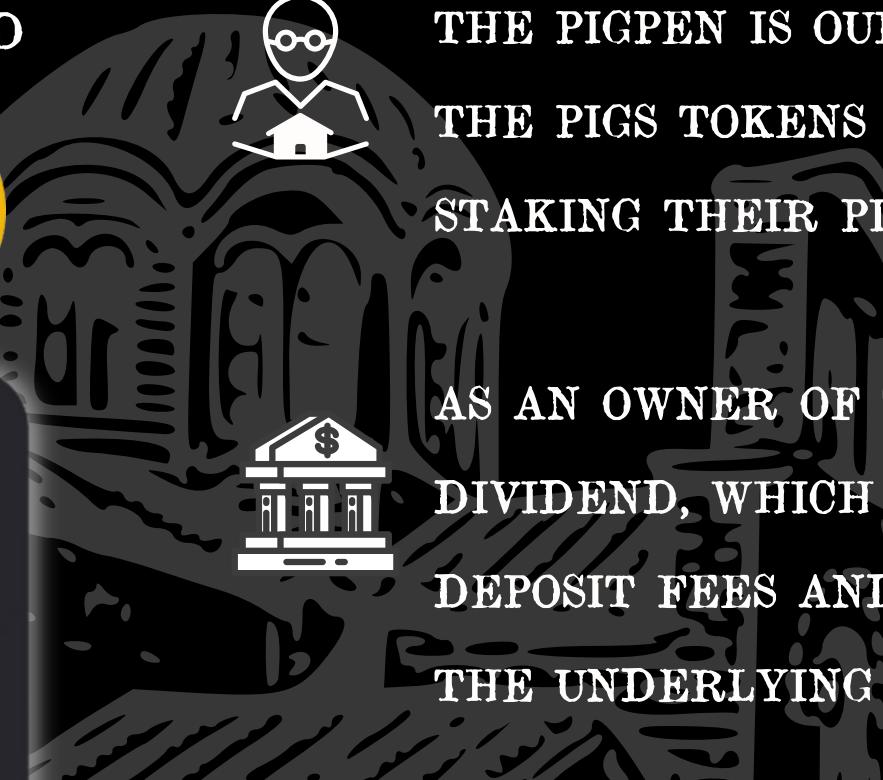

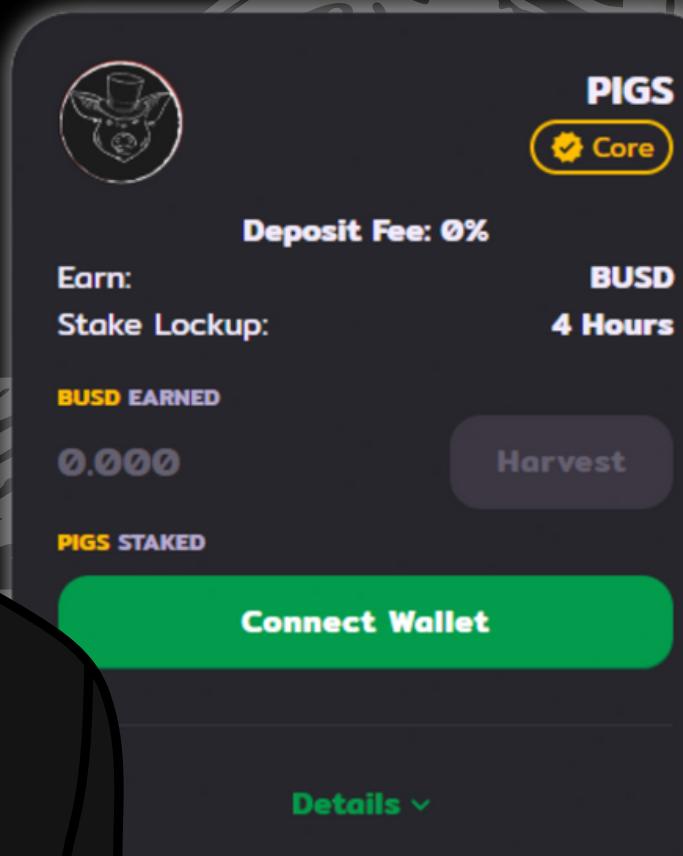

Earn BUSD

THE PIGPEN IS OUR STAKING PROTOCOL WHERE HOLDERS OF THE PIGS TOKENS BECOME OWNERS OF THE PLATFORM BY STAKING THEIR PIGS.

AS AN OWNER OF THE PLATFORM YOU EARN A BUSD DIVIDEND, WHICH IS GENERATED FROM THE PLATFORM DEPOSIT FEES AND THE TAXES ASSOCIATED WITH THE UNDERLYING ASSETS.

IN ADDITION TO BUSD REWARDS, STAKERS IN THE PIGPEN ALSO EARN PIGS WHICH ARE BEING GENERATED FROM THE DEPOSIT AND WITHDRAWAL FEES FROM PIGGY BANK.

# THE PIGPEN VESTING

WHEN DEVELOPING LOGIC STRUCTURES FOR OUR PRODUCTS, WE NOT ONLY LOOK TO WHAT'S WORKING IN DEFI BUT ALSO IN TRADITIONAL MARKETS. MANY DEFI DEVELOPERS OVERLOOK FUNCTIONS THAT HAVE WORKED FOR GENERATIONS IN TRADITIONAL MARKETS WHICH WOULD FIT PERFECTLY IN A DEFI PRODUCT.

PIGS WHICH HAVE BEEN STAKED IN THE PIGPEN REPRESENT A SHARE OWNERSHIP OF THE ANIMAL FARM PLATFORM. THIS INCLUDES A SHARE OF ALL PLATFORM FEES AND A GOVERNANCE PROTOCOL WHICH ALLOWS THEM TO VOTE ON THE FUTURE OF THE PLATFORM.

DUE TO THE IMPORTANT ROLE PIGPEN STAKERS HAVE IN THE PLATFORM AS WELL AS THE HUGE DIVIDEND PAYOUTS THEY EARN, IT IS IMPORTANT THAT A VESTING PROTOCOL IS IMPLEMENTED ON THE PRINCIPAL OF PIGPEN STAKERS.

JUST AS COMPANY SHARES ARE OFTEN VESTED IN TRADITIONAL MARKETS TO ENSURE THE OWNERS ARE OPERATING TO THE LONG TERM BENEFIT OF THE PLATFORM, WE HAVE IMPLEMENTED A 50 DAY VESTING PERIOD ON THE PIGS PRINCIPAL STAKED IN THE PIGPEN. THIS 50 DAY VESTING PERIOD WORKS BY MAKING 2% OF STAKERS PRINCIPAL AVAILABLE FOR WITHDRAWAL DAILY, EFFECTIVELY MAKING 100% OF THEIR PRINCIPAL WITHDRAWABLE AFTER 50 DAYS.

# THE PIGPEN'S DIVIDEND VAULT

DIVIDENDS IN THE VAULT ARE ACCUMULATED VIA:

- PRE-ALLOCATED BUSD INJECTIONS FROM FUNDS GENERATED IN THE LAUNCH PHASE
- THE 3% OF THE TRANSACTION TAX ON THE ANIMAL FARMS' NATIVE FARM TOKEN, DOGS
- 75% OF THE DEPOSIT FEES FROM NON-CORE STAKING CONTRACT ARE CONVERTED TO BUSD AND SENT TO THE VAULT
- PIGGY BANK FEES
- REHYPOTHECATION OF FARM FUNDS FOR LENDING AND LP STAKING

DAILY REWARDS ARE PAID FROM THE VAULT ACCORDING TO YOUR SHARE OF THE PIGPEN, AND ACCUMULATE INCREASINGLY MORE BUSD FOR HIGHER REWARDS

OVERTIME.

- 30% OF THE DEPOSITS IN THE VAULT ARE PAID IMMEDIATELY TO PIGS STAKERS.
- 70% OF THE DEPOSITS ARE RELEASED TO STAKERS IN DAILY PAYMENT DRIPS OF 3% OF THE AVAILABLE BALANCE FOR REWARDS.
- PIGPEN BALANCES WILL BE TIME LOCKED WITH 2% OF A STAKERS BALANCE BEING MADE AVAILABLE FOR WITHDRAW DAILY. (EXAMPLE: DAY 4: CAN WITHDRAW 8% OF PIGPEN BALANCE. DAY 49: CAN WITHDRAW 98% OF PIGPEN BALANCE.)

# THE PIGGY BANK V2

## PIGS/BUSD LIQUIDITY STAKING

THEANIMAL.FARM

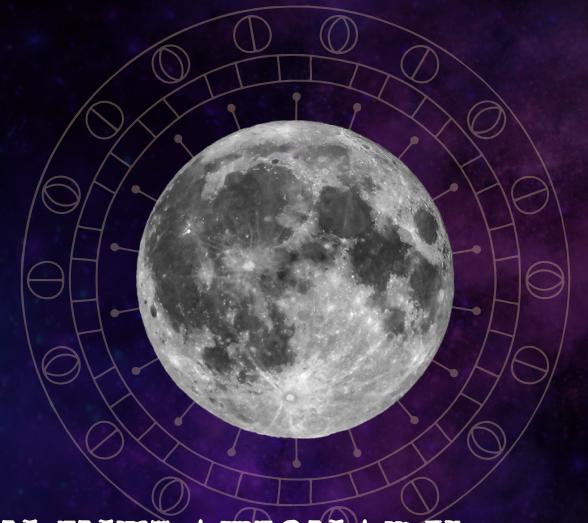

# THE PIGGY BANK

THE PIGGY BANK IS THE FIRST EVER NON-INFLATIONARY VARIABLE TIME STAKING ANNUITY.

THE PIGGY BANK COMBINES THE BEST ELEMENTS OF HEX WITH THE BEST ELEMENTS OF DRIP GARDEN. WITHOUT THE NEGATIVES OF HEX SUCH AS:

- INFLATION
- LOW APY
- DILUTED STAKING REWARDS DUE TO CENTRALIZATION
- LINEAR BONUSES FOR LONGER STAKING
- AND OTHER LIMITING FACTORS

# FEATURES

GET A 20% BONUS WITHIN 48HRS OF LAUNCH.

EARN UP TO 3% ROI A DAY ON YOUR PRINCIPAL.

YOUR PRINCIPAL IS INCREASED THROUGH A TIME LOCKING MULTIPLIER,  
CREATING AN EXTREMELY POWERFUL OPPORTUNITY FOR COMPOUND GROWTH.

SMALLER DIVIDENDS CAN BE COMPOUNDED.

"LONGER PAYS BETTER" MECHANICS WITH NON-LINEAR INCREASE IN PRINCIPAL  
BUYING POWER FOR TIME STAKING LONGER.

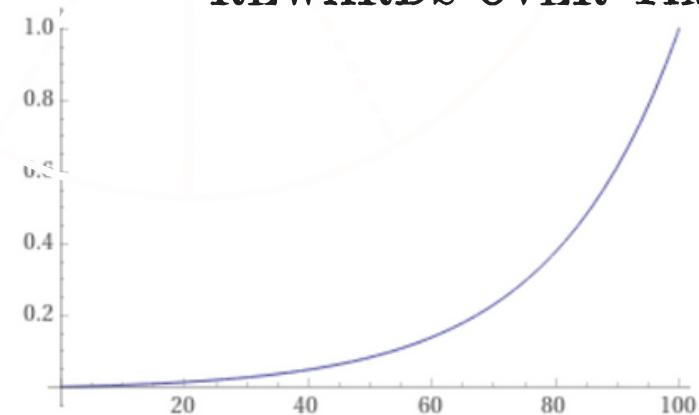

HAVE MULTIPLE STAKES FROM THE SAME WALLET ALLOWING USERS TO SET UP  
CONVENIENT LOCK UP STRATEGIES.

EARN REFERRAL REWARDS AND AIRDROP YOUR TEAM.

# THE MULTIPLIER

REWARDS OVER TIME

Arc length of curve

$$\int_0^{100} \sqrt{\frac{61491600625 + 3^{8-(2x)/25} \times 10^{(2x)/25} \log^2(\frac{10}{3})}{247975}} dx \approx 100.012\dots$$

THE MULTIPLIER FOR TIME LOCKING REWARDS IS PLACED ON THE STAKERS PRINCIPAL, NOT TACKED ON TO CLAIMABLE DIVS AT THE END OF THE STAKE.

THIS MAKES THE BONUS REWARDS FOR TIME LOCKING STAKES EXPONENTIALLY MORE POWERFUL AS THE STAKER COMPOUNDS THE INCREASED ROI GENERATED FROM THE BONUS MULTIPLIED PRINCIPAL.

THE BONUS IS NOT FULLY APPLIED TO THE PRINCIPAL ON DAY 1 OF THE TIME LOCKED STAKE AND IS INSTEAD APPLIED TO THE PRINCIPAL USING THE ABOVE DISPLAYED DISTRIBUTION CURVE, WITH:

- 30% OF THE MULTIPLIER BONUS BEING ADDED TO THE PRINCIPAL IN THE FIRST 75% OF THE STAKE'S LENGTH
- AND THE REST BEING ADDED EXPONENTIALLY TO THE PRINCIPAL IN THE LAST 25% OF THE TIME LOCK UP

# REFERRALS

THE REFERRAL BONUS YOU GET IS DEPENDENT ON HOW MANY DOGS YOU HAVE STAKED IN THE ANIMAL FARM. THIS NOT ONLY HEAVILY INCENTIVIZES DOGS STAKING BUT ALSO PREVENTS SELF REFERRAL LEACHING.

WE ALSO TAKE ADVANTAGE OF A REFERRAL SYSTEM THROUGHOUT THE WHOLE LIFE OF THE PROJECT, NOT JUST IN YEAR 1, AND HAVE A BATTLE HARDENED REFERRAL SYSTEM THAT CANNOT BE USED TO LEACH OR DRAIN THE SYSTEM.

NOTE: ALL REFERRAL BONUSES WILL BE SET TO 2% UNTIL DOGS GO LIVE. REFERRAL BONUSES WILL DEFER TO THE AMOUNT OF DOGS<sup>SG</sup> THE REFERRED HAS STAKED IN THE SINGLE ASSET DOGS POOL ONCE DOGS GOES LIVE AS EXPLAINED BELOW.

# REFERRALS

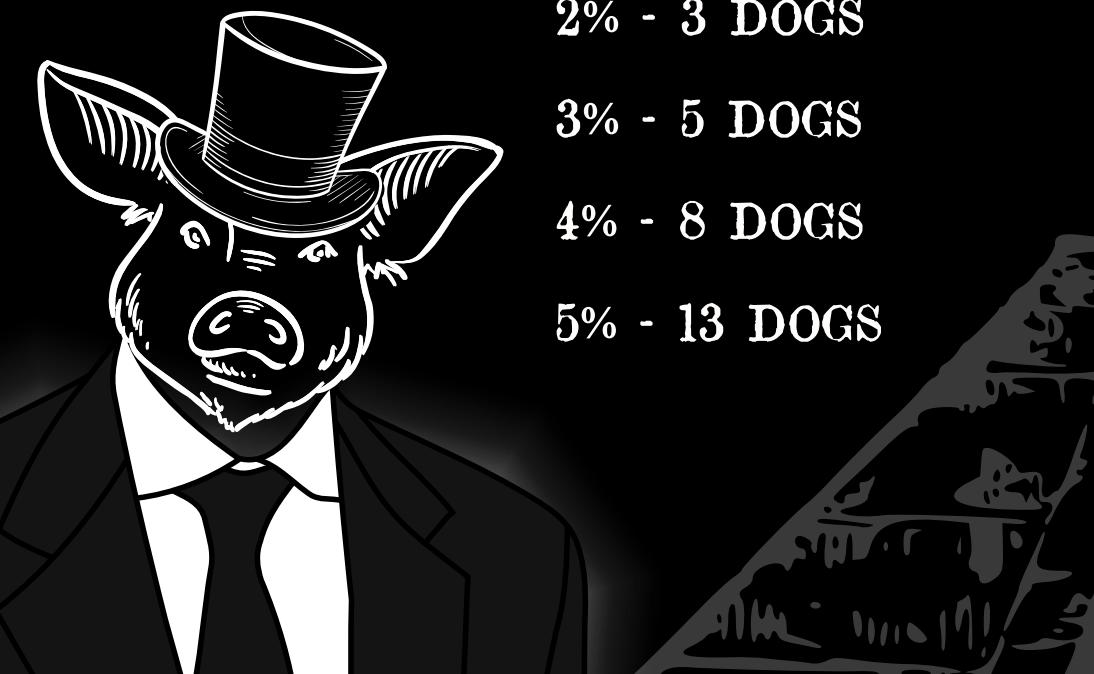

THE REFERRAL COMMISSION STRUCTURE BASED ON DRIP'S HIGHLY SUCCESSFUL BR34P DEPENDENCY MODEL WITH A FIBONACCI SEQUENCE PROGRESSION.

## REFERRAL % VS. DOGS STAKED

# DRIP/BUSD GARDEN

[THEANIMAL.FARM](http://THEANIMAL.FARM)

# OFFICIAL DRIP PARTNERSHIP

DRIP Partnership.

DRIP will be a major promotional vehicle for the farm. DRIP Network brings the farm immediate exposure to thousands of investors, who get the assurance that trusted developers with a strong track record are involved.

DRIP will see a spike in demand as a new use case is introduced as well as through shared promotion. The farm will incentivise farmers to add BUSD liquidity to DRIP, giving DRIP price appreciation as well as deeper level of decentralization and stability.

# DRIP LIBERATION

We have created a contract called DRIP Liberation.

The DRIP Liberation contract allows farmers to add DRIP/BUSD liquidity to PancakeSwap without paying the 10% transaction tax. This removes the greatest barrier for DRIP farmers, allowing them to ROI on the farm and the DRIP/BUSD Garden game much sooner.

Happy farming Drippers!

# DRIP/BUSD LP GARDEN

## Garden Info

The animals on [TheAnimal.Farm](#) always knew about the Garden just outside of the farm's property but never got to utilize its rich soil until now! With the greener pastures brought on by the revolution, the animals decided to build a DRIP irrigation system and buy PLANTS for their garden in order to harvest SEEDS. The SEEDS can then be sold or planted to expand their garden and grow their food supplies exponentially.

The DRIP/BUSD LP Garden Game produces 3% daily (1095% APR), according to the current mining efficiency rate. The harvest efficiency rate rises and falls as you and other animals buy PLANTS, harvest SEEDS and compound earnings.

The object of the game is to plant SEEDS, sooner and more often than other animals. This in turn earns you more SEEDS to harvest faster. Buying more PLANTS using your daily SEEDS harvest (DRIP/BUSD LP) will 3x your SEEDS within 30 days or less.

[DRIP/BUSD\\_lp](#) tokens can be acquired with no tax by [using the DRIP Liberation contract](#) on [TheAnimal.Farm](#) platform.

# DRIP/BUSD LP GARDEN

Players in the DRIP community have been asking for a new contract which is "higher risk/ higher reward" than the Faucet contract found on Drip.Community/Faucet but that still offers sustainability and interesting game theory. DRIP/BUSD LP Garden is more than just a fork of other less sustainable "miner" themed games which were popular in the space.

A DRIP/BUSD LP Garden game is the perfect fit for the new farm partnership utilizing the DRIP Liberation contract. It also further decentralizes and deepens the DRIP liquidity pool on PancakeSwap with stablecoin liquidity which has massive positive sustainability and promotional implications for DRIP Network.

## Referrals

We understand the importance of promotion and have implemented a 5% referral commission on all gardeners bought using your referral link!

# DRIP/BUSD LP GARDEN

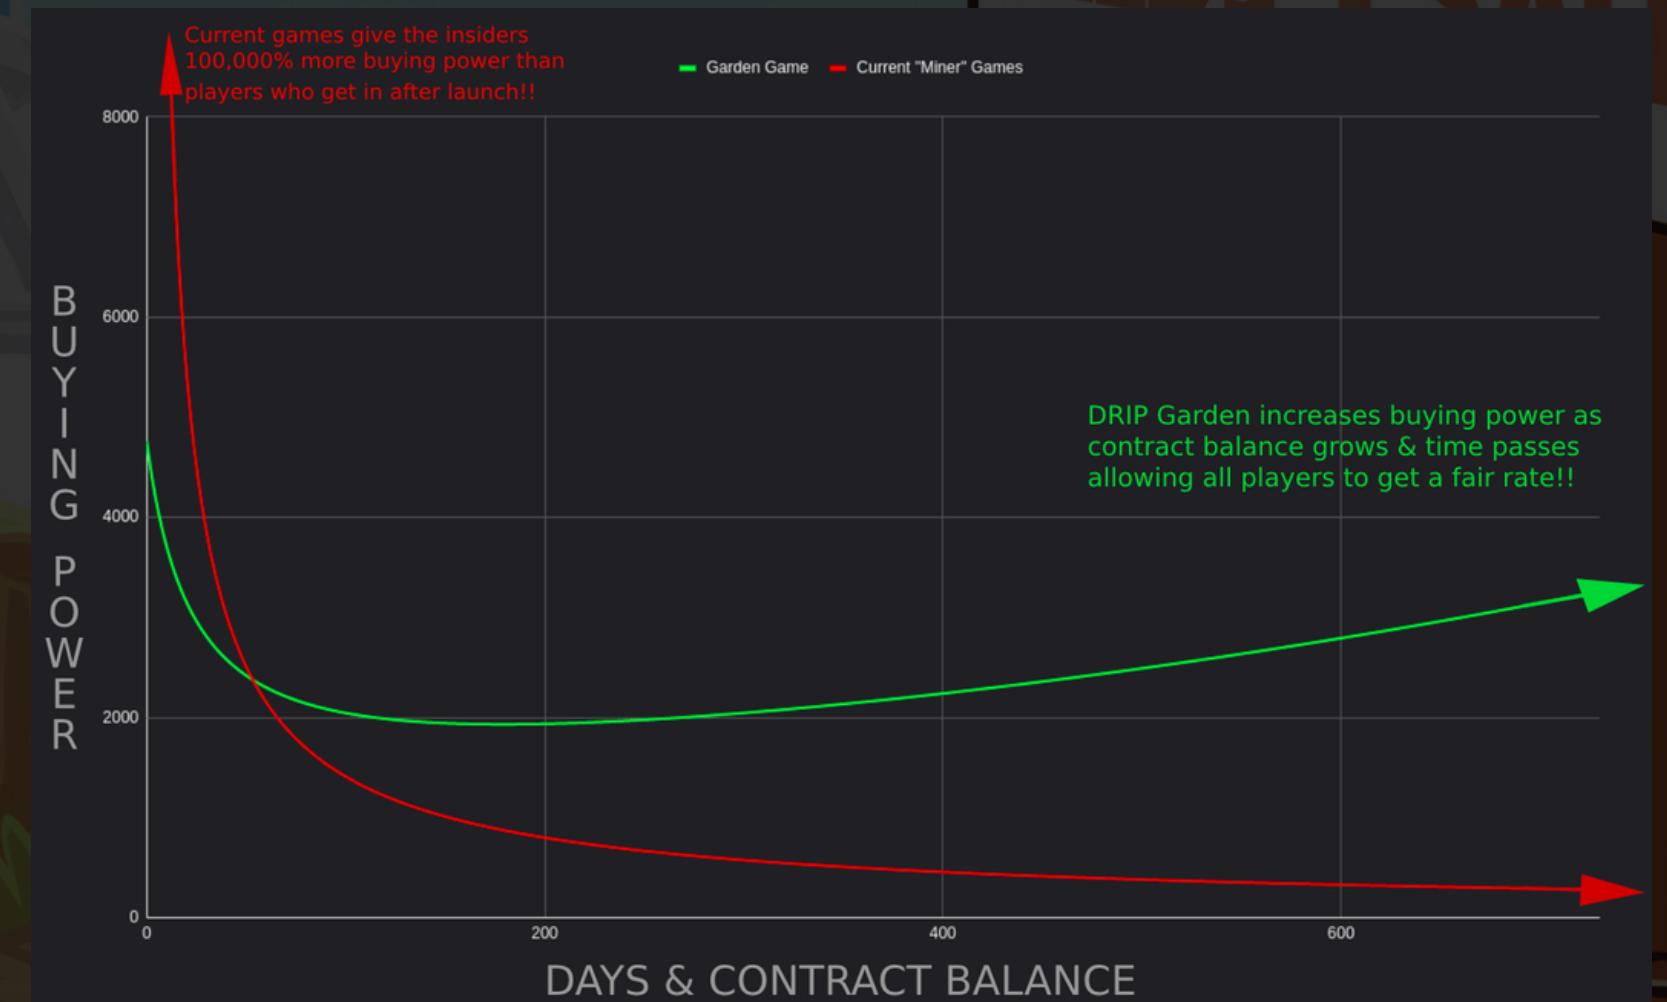

## Sustainability

Unlike its predecessors, a contract balance multiplier as well as a time multiplier has been added which ensures everyone gets a fair buying power regardless of when they come in.

Existing miner protocols are designed so the first person who enters the contract can deposit 1% of the capital with enough buying power to withdraw almost all of the capital which comes in after it. It's an unfair system which is designed for insiders and cash grabs.

The DRIP Garden is a true game where all players start out relatively equal and what determines your payout is how often you plant your SEEDS (compound) vs. how often you sell them (withdraw).

It is still, however, best to get an early start and compound as much as possible to grow as large of a garden as possible. The time multiplier increases new capital's buying power by 0.1% a day non-compounding and is designed to attract multiple waves of new cashflow as investors take advantage of better rates.

# OWN YOUR SHARE IN THE ANIMAL FARM!

The developers of The Animal Farm believe that we have created the ideal platform for yield farming. Through mechanics from decentralized ownership giving investors even more stake in the platform, to the dynamic supply control, allowing for a more intelligent approach to emission rates, we will out perform all of our competition in the space.
